

BEND MESH. SHAPE MESH. ANYWAY YOU WANT MESH!

We can Cut and Bend mesh to meet just about any requirements and offer fast, reliable turnaround, with lead times of less than 3 days for most work. The Cut & Bent Mesh can then be delivered to site to suit your work schedule, or picked up from your nearest OneSteel Reinforcing Branch.

Ask your Branch for details of how we can save you time, effort and money on your next project.

Cut & Bent Barrier Mesh Cuts Site Labour & Speeds Construction

A large Cut & Bent Mesh project for OneSteel Reinforcing involved prefabricating special sheets of mesh and bending them to suit the required profile for Concrete Edge Barriers on the M7 Motorway in Sydney.

Several thousand Cut & Bent Barrier Mesh panels were supplied to the project, enabling the builder, Abigroup and Leighton Contractors (ALJV), to reduce manpower for this aspect of the project from 40 to just 4! Not only did the use of Cut & Bent Mesh provide huge labour savings on site, it simplified and boosted the speed of construction and improved OH&S.

Other Cut & Bent Mesh Applications include ...

Precast Concrete

Accuracy is the key for mesh for precast concrete applications such as walls, culverts, drainage pits and the like. All Cut & Bent precast mesh is manufactured to very low tolerances to ensure it fits accurately within precast moulds, simplifying steelfixing.

Various Types of Footings

We can Cut & Bend Mesh to suit a wide range of footings requirements, from simple Trench Mesh to "C" and "U" Sections.

Safety Screens

We are able to cut and bend all types of mesh for a variety of safety applications, including mesh for Throw Screens on major road overpasses. Such panels can be V-pressed to suit a variety of cappings and may also be pre or post-galvanised.

Shelving and Displays

Cut & Bent Mesh can be supplied with a wide range of finishes from galvanizing to chrome-plating to a variety of painted finishes to suit the application, making mesh the ideal choice for displays in nurseries, hardware stores and the like.

Pipe Encasement

For roadways with high traffic loading requiring Pipe Encasement, we can supply pairs of Cut & Bent C-sections that greatly simplify steelfixing and speed construction on site.

Mining Applications

Sheets of Mesh can be cut to specific dimensions to suit a variety of mining applications, improving handling of mesh in difficult underground conditions. All mesh for mining applications is flush cut for improved safety and may be galvanised for corrosive environments.
